## Finding the Rule

## What is a Rule?

The rule is an equation which enables us to mathematically relate the variables in any given situation.

There are two types of situations that we will be looking at today:

1- When given the rule, complete the table of values
2-Given a table of values, find the rule

## Example 1

## Let's start off easy

Given the rule below, complete the following table of values:
$y=2 x$

| $x$ | $y$ |
| :---: | :---: |
|  |  |
|  |  |
|  |  |

## Example 2

Given the rule below, complete the following table of values:

$$
y=-3 x+1
$$

| $x$ | $y$ |
| :---: | :---: |
|  |  |
|  |  |
|  |  |

## Finding the Rule

Every time that we are given a rule of a function or looking for the rule of a function, the rule is always in the form:
$y=m x+b$
This rule relates variables x and y

## Finding the Rule

The letter $m$ in the equation is called the rate. The rate tells us how the $y$-values change in relation to how the $x$-values change.

For example, what do we notice in the following table?

| $x$ | $y$ |
| :---: | :---: |
| -1 | -5 |
| 0 | -3 |
| 1 | -1 |
| 2 | 1 |

## Finding the Rate (m)

To find $m$, we use the equation:

$$
\text { Rate }=m=\frac{\Delta y}{\Delta x}
$$

Where, $\Delta \mathrm{y}$ is the change in the y -values
and
$\Delta x$ is the change in the $x-$ values

## Finding the Rate

So, let's go back and look at our table:

| $x$ | $y$ |
| :---: | :---: |
| -1 | -5 |
| 0 | -3 |
| 1 | -1 |
| 2 | 1 |
| $\Delta x=$ | $\Delta y=$ |

$$
\text { Rate }=m=-\underline{\Delta} y=
$$

## Initial Value (b)

The letter $b$ in the equation $y=m x+b$ is called the initial value.

The initial value is the value of " $y$ " when $x=0$

## Initial Value (b)

So, for our table of values:

| $x$ | $y$ |
| :---: | :---: |
| -1 | -5 |
| 0 | -3 |
| 1 | -1 |
| 2 | 1 |

Initial value $=\mathrm{b}=$
Rule: $y=m x+b$
y =

## Example 3

Given the following table of values, find the rule that represents the situation below:

| $x$ | $y$ |
| :--- | :--- |
| 0 | -3 |
| 1 | -1 |
| 2 | 1 |
| 3 | 3 |

## Example 4

Given the following table of values, find the rule that represents the situation below:

| $x$ | $y$ |
| :---: | :---: |
| -3 | -1 |
| 0 | 0 |
| 3 | 1 |
| 6 | 2 |
